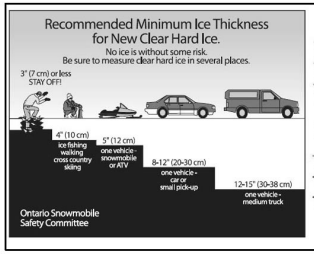
Safe Riders!
You Make Snowmobiling Safe.™



NO ICE IS WITHOUT SOME RISK… MINIMIZE YOUR RISK
- It is critical that the ice quality or type of ice is evaluated before you travel.
- Clear hard, new ice is the only kind of ice recommended for travel.
- Avoid!
  - slushy ice
  - ice on or near moving water i.e., rivers, currents
  - ice that has thawed and refrozen
  - layered or rotten ice caused by sudden temperature changes
- Other risk factors that weaken or "rot" ice:
  - snow on ice that acts as a blanket to prevent hardening of ice
  - pressure ridges due to wind or current pressure
